

**LIGHT-BALLS & LASER-BEAMS MAKE “MESSY” (BUT GENUINE)  
CIRCLES, 2016 & 1998  
-- BLT RESEARCH NOW HAS PAYPAL --**

by  
Nancy Talbott  
BLT Research Team Inc.  
[www.bltresearch.com](http://www.bltresearch.com)

Since early 2015 I've been unable to pay BLT's webmaster and so started a FB page to keep people informed to some extent about ongoing crop circle-related events. On August 14, 2016 after a FB post about Robbert v/d Broeke's video of a light-ball (<http://www.bltresearch.com/robbert/bolcropcircle2016.pdf>) making a crop circle, followed by another about Laurance Rockefeller forwarding two BLT reports (<http://www.bltresearch.com/published/facebookclosure.pdf>) to his friend Dr. John H. Gibbons, previous Chief Advisor to the President regarding the White House Office of Science & Technology and later an advisor at the U.S. State Department--my FB page suddenly disappeared, making it imperative that I ask for donations to BLT to pay for updates to the website.

Nancy's FB page, inexplicably reinstated on September 14, 2016.  
<https://www.facebook.com/profile.php?id=100009354713899>

Although my FB page has now reappeared, posts there are not in-depth. To keep critical details coming in full reports BLT needs your financial support and I've finally established a PayPal account. Donations of **any amount** are greatly appreciated and **for U.S. citizens all donations are tax-deductible**, since BLT is a 501-3C non-profit corporation. Thank you for your support....

2016 - Robbert v/d Broeke watches 4 light-balls shoot "laser-like" light beams at sloping side of highway, creating 4 "messy" circles in wild grasses & nettles.

Around midnight on the night of August 13-14, 2016 (Dutch time) Robbert v/d Broeke (see multiple reports: [www.bltresearch.com/robbert.php](http://www.bltresearch.com/robbert.php)) began to get the "restless" feeling he usually does when something anomalous is about to happen. Although he rarely goes out alone at night and especially doesn't like to use his motorbike when there is a lot of traffic, the feeling was so strong he did go out around 1:30am, driving first to Zegge and then to Ruchpen (2 villages in his area)—but saw nothing unusual and so turned back toward his apartment in Bosschenhoofd.

At the end of the bridge near the Bosschenhoofd airport and the "Eye" design in planted flowers his motorbike suddenly stopped by itself & he couldn't re-start it. He had began pushing the bike when he saw a big flash of light and 4 light-balls (1 big & 3 smaller ones) suddenly appear, followed by "laser-like light beams" shooting down from the BOLs to the sloping side of the road on his right. He also heard an "electrostatic" type of noise as these light beams hit the ground. Then the light-balls, one by one, just went out & disappeared.

Robbert's drawing of relative sizes & placement of 4 circles created by 4 different-sized BOLs & "laser-like" light beams.  
(Drone could not be used due to proximity of circles to airport runway.)

Grains mixed in with wild grasses & nettles show nodes **bent downward** (white arrows), **elongated** nodes (red arrows) & **expulsion cavities** (blue arrows) throughout.  
(See: <http://www.blresearch.com/plantab.php>)

As Robbert walked closer to the edge of the road he saw 4 circles flattened in a line along the side of the slope, overgrown with wild grasses and nettles (which have very sharp spines that sting if touched). He walked carefully down to the circles to feel the energy (which he says was very “gentle”) and, when he got to the last circle, was “flabbergasted” as an “electric” discharge of some kind--a bright flash of light--occurred right between his feet. In spite of his sense that this discharge was electrical, he did not *FEEL* a shock of any kind.

Four circles formed by 4 BOLs shooting light-beams down to ground only meters away, as Robbert pushed his bike along edge of highway.

Circle #1 (closest to road) with Bosschenhoofd "Eye" & small local airstrip in background.

Circle #1 formed around a clump of thick-stemmed nettles, which were splayed *radially* outward into other wild plants & grasses.

Robbert had to walk carefully around this circle because it had formed around thick-stemmed nettles which have sharp barbs along their stems which are painful if touched (notice Astrid is wearing gloves in close-up photos she took the next morning).

**All photos in the rest of this 2016 report were taken by Astrid Wevers-grims on September 15, only hours after Robbert watched the circles form.**

Thick stems of various plants were curved along their entire lengths, mixed in among the other wild grasses & plants.

Photographer Astrid Wevers-grims is wearing gloves as she works to get close-up shots of bent nettles in Circle #1.

When this kind of bending is documented in thick-stemmed plants within hours of a circle forming (without concurrent breakage), the stem bending is caused by the heat-producing energy component (microwave radiation) of the circle-creating energy complex (<http://www.bltresearch.com/published/physics.html>) instantly heating up the plants' internal moisture to steam--thus softening both the stems' internal and external fibers so the plants can be flattened without breakage of the normally rigid stems.

2<sup>nd</sup> circle occurred mostly in grasses & was slightly farther down slope along edge of road.

Circle #2, showing generally "fluffy" lay & marked browning of grasses, compared to other circles.

The second circle formed primarily in grasses and it appears that the heat from the "laser-like" light-beams Robbert observed shooting down from the light-balls to the roadside caused considerable drying out and browning of the grass.

Since several of the documented plant abnormalities found in genuine crop circles are known to be caused by heat, did the “light-beams” dry out the grasses in Circle #2?

Grasses swirled around one of the apparently untouched green clumps in Circle #2.

Circle #3 included swirled, thick-stemmed plants along with grasses.

In ALL of these circles which included wild grains of varieties examined by BLT in hundreds of genuine crop circles from multiple countries over the years, clear ***elongated nodes and expulsion cavities***--the two scientifically-documented **VISIBLE** plant changes known to be caused by the not-fully-understood circle-making energy complex (<http://www.blresearch.com/plantab.php>) in BLT's published papers (<http://www.blresearch.com/published.php>) were present--**as well as downward-bending plant stem nodes** (rather than upwardly bent, the natural attempt of plants to reorient to sunlight, called "phototropism"). The presence of thick-stemmed weeds bent in circular swirls, without breakage, is another clear indication that these "messy" circles—created by "laser-like" light beams emanating from visible light-balls—were in fact the real McCoy.

Red arrows indicate ***elongated nodes***; blue arrows point ***to expulsion cavities*** (holes blown out at the stem nodes); white arrows indicate ***downward bending nodes***.

After Robbert experienced the brilliant "electric" light discharge in-between his feet in Circle #4, he didn't stay on the roadside much longer. Always concerned that he might be seen and then accused (once the circles were discovered the next day) of making them mechanically, he decided to leave.

Returning to the motorbike he began to push it again, but then got a thought that perhaps it might now start normally and—when he tried--found it ***did*** start, so he was able to drive the rest of the way home. He told me that night he thinks that if the motorbike hadn't stopped by itself earlier he would not have seen the light-balls or the "laser-like" beams of light shooting down to the field...and wouldn't have seen the circles, since he was driving at normal speed on the highway. Robbert describes event: [https://www.youtube.com/watch?v=WivN5\\_CyMy4](https://www.youtube.com/watch?v=WivN5_CyMy4)

Circle #4 (smaller than #1 & #2) was swirled around a single standing nettle in amongst multiple wild grasses & weeds.

---

In a recent Skype talk Robbert told me about riding on the dike near his “Special field” around 3pm on a sunny afternoon in 1998—that he had felt he should go to that place. The wheat was green and out of the corner of his eye Robbert saw a white light-ball, “bigger than a football,” just hanging in the air “like a little sun” about 15m away. He stopped the bike and the BOL came closer and began to

rotate down low over the grain and, although he didn't visually see the "laser-like beams" this time, he felt the light-ball was sending invisible "radiation" down to the crop and he heard the now-familiar "static-like" noise for about 15 seconds.

As he watched, the light-ball went down into the wheat, then rose and slowly condensed into a non-circular form and hung "vibrating" right over the crop formation it had just made--then shot straight up and disappeared.

Robert's drawing of 1998 "messy" crop formation made by light-ball which, if he hadn't seen the BOL make it, he would have thought was a hoax—a "very bad one."

Walking into the field he was aware of the smell of "cut grass" and found the ground in the formation was still warm, but the plants were a "mess," broken stalks standing throughout the flattened areas and the seeds fallen out on the ground, as if "somebody had stomped" on them. The "lay," such as it was, was totally chaotic, with broken and partially-standing plants mixed in with bent over and "cut" plants amongst the more-typically flattened crop...to the point where parts of the overall outline were hard to distinguish.

The standing plants around the edge of the circle were also damaged, as if something "sharp had cut into them" and he could see the stems' internal moisture exuding from these "cut" stems. I've seen "cut" stems (usually a 45° angle) in several formations, once just outside a very geometric double spiral in Germany in the early 1990s, and they've been photographed elsewhere also.

From Robert's description of this formation and his drawing, it does seem likely that most people's expectation of what a crop circle should look like would rule-out their acceptance that this one was genuine—not mechanically flattened by people—in spite of the fact that Robert **visually saw** a light-ball make it.

45 degree "cut" marks found on multiple occasions in crop formations in several countries is a feature not yet explained.

Multiple cuts and broken stems around perimeter of crop formation inside a standing section of plants inside a crop circle.

BLT's peer-reviewed and published (<http://www.blresearch.com/published.php>) findings consistently emphasize the fact that overall "geometric" design and tightly-flattened, symmetrical lays within precise perimeters **are not proven indicators of authenticity**. W.C. Levensgood's 1994 crop circle paper featured a decidedly "un-geometric" U.S. formation in which the plant abnormalities proved it was genuine, and the most thoroughly scientifically-evaluated formation to-date known to be real—the 1999 Edmonton, B.C., Canada formation subjected to both Levensgood's standard plant and soil tests as well as to x-ray diffraction of clay minerals in its soils (<http://www.blresearch.com/xrd.php>) by additional scientific experts in the XRD technique and in clay mineralogy--had a totally "chaotic" lay.

**“Perfect” geometric design NOT a proven criterion of “authenticity”**

“Chaotic” lay in most scientifically-vetted & unequivocally authentic crop circle evaluated to-date, based on multiple parameters by multiple scientists.

Robbert reports that during the 1998 light-ball event he had the feeling the light-ball was “aware” of him and that the energies involved came out of “another dimension,” more like the “world” where we go when we die. He also said he felt that some part of himself was IN the actual light-ball, that his consciousness was functioning in conjunction with the consciousness he perceived was present in the light-ball itself.

Robbert did tell his parents and his father did photograph the 1998 light-ball circle (we don't have access to those images) but Robbert never told anyone else about that formation, since he was certain it would be considered a hoax.

July 18, 2010-lay in UK crop circle at Wentworth Castle which looks much like Robbert's description of what he found in the 1998 Dutch BOL formation.

I regret this 2010 UK circle wasn't sampled. It was a fairly large ring made up of multiple-sized circles and looked quite “geometric” from the air...and I'll bet that, had it been tested, we would have found it was genuine. Which, if it was, would be a reminder not to “judge a book by it's cover.” The crop circle phenomenon is much more complicated than most people appreciate...and there is still a great deal to learn.
